THE VITAL COMPONENT IN YOUR TOOLBOX

The Workmate Planned Maintenance & CMMS Software system provides affordable and easy to use functions for engineers, to help maintain plant, facilities and equipment.

Workmate is a revolutionary computerised maintenance management system (CMMS) that puts YOU back in charge of the countless tasks and record keeping associated with plant and systems maintenance.

USING WORKMATE IS SIMPLICITY ITSELF

For the last 30 years, companies of all sizes and in all industries have trusted Workmate with their maintenance management.

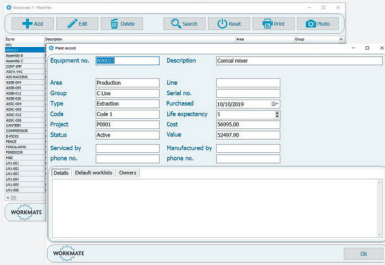

We have built Workmate to be the perfect fit for most businesses. The optimal balance of simplicity and power.

We utilise the latest technology to enable Workmate to run however it suits you. In house on your own computer systems, over the cloud or by using mobile devices.

Plant File

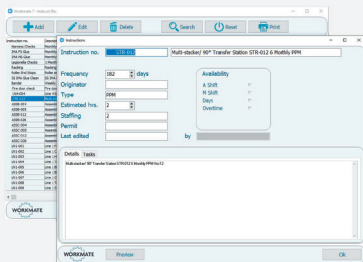

Store your plant items information in here. This could be Plant Machinery, facilities, buildings, indeed all the items that you maintain. Hold as much or as little information in here as you need.

Also provide links to important other information. History, Spares, Documents, Pictures, Manuals and Risk assessments.

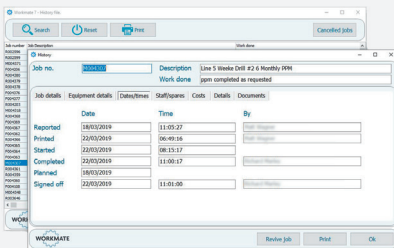

Instruction File

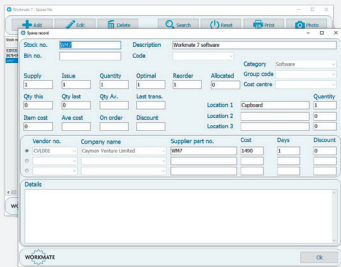

In here enter all the tasks that you perform on your equipment. These could be regular tasks such as Routines, inspections, PM's or overhauls. This information can be printed on to your works orders.

History File

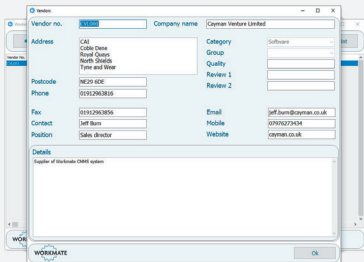

When jobs have been completed the details you have collected are all stored in your History File. As with all the files in Workmate, you can search and filter the information on whatever basis you want. This information can then be used to produce simple list reports, machine history, downtime resources used and much more information

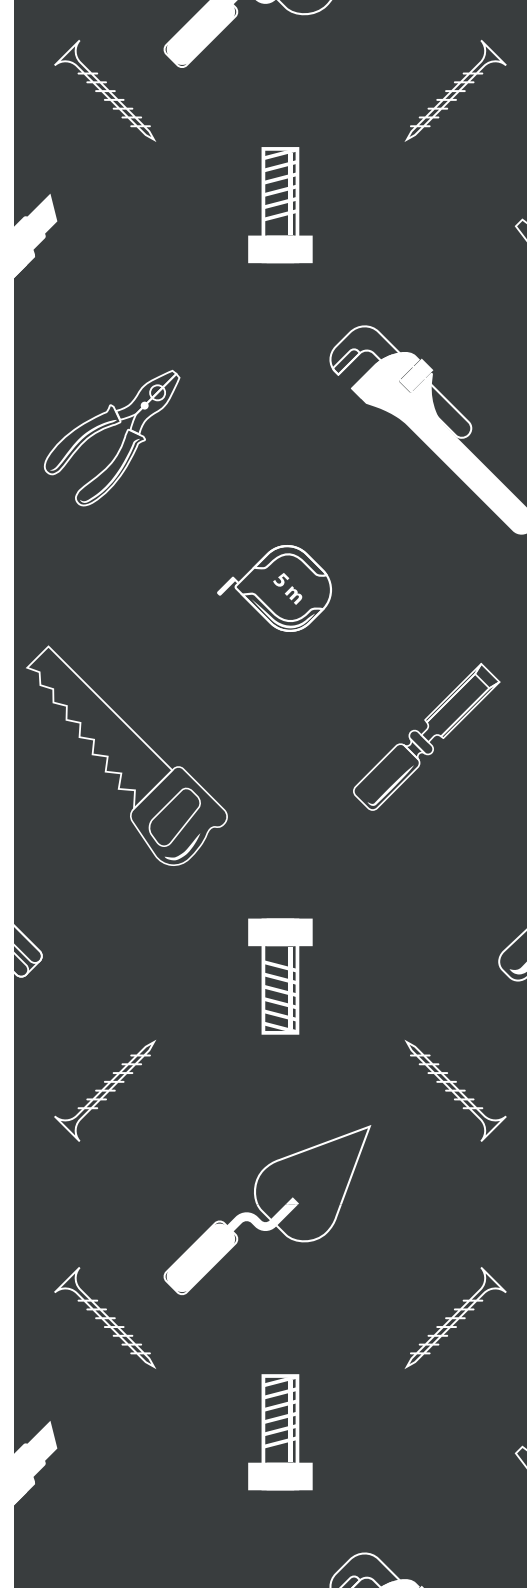

Spares File

You can hold an inventory of the spare parts that you use. Against them you can hold quantity in stock, reorder levels, nominated supplier, location, cost and if you wish, much more.

Vendor File

This is a register of the suppliers of the spares that you use with all of their contact details, address telephone and email.

FEATURES

We offer a custom-tailoring service to YOUR specific needs around our rock-solid core program, ensuring you get a truly useful system.

Mods & Enhancements

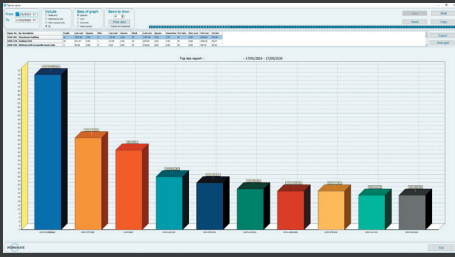

Workmate is designed installed and supported by us here at Cayman. This means that we are able to provide a service to users where we can add bespoke features or enhancements to the system to individual users' specification.

Multi user

There are Workmate versions for stand alone, multi-terminal or site licences.

Reports & Graphs

Having recorded the work done on your equipment in history, a comprehensive suite of reports and graphs shows you things like, Machine downtime, common breakdowns, top ten worst performing equipment, future maintenance prediction spares used and many others. Most reports can be filtered to display only selected areas, equipment or work type.

Scheduled Maintenance

By linking your plant items to instructions, you can set up regular scheduled maintenances, by calendar or by whatever units you wish, hours run for example

Worklist

This is the heart of your work control. From here you can raise new work, add in retrospective work, print out work orders and allocate or prioritise work. It's also where you can complete jobs with as much or as little detail and comment as you need including time spent, spares used and downtime.

Breakdown Reporting

Users, who you have given access, can log on to raise work requests. This can be done via a single easy to use screen

A blue icon representing a network, showing three computer monitors connected by lines to a central point, symbolizing a multi-user or multi-site environment.

Desktop and networked

Workmate is designed to run on any Windows PC running any version of Windows.

Workmate can be used on a single PC, a network with a specific number of users or a site license with unlimited users. Workmate is also available for multi-site.

With 30 years experience, however you want to run Workmate, we can do it.

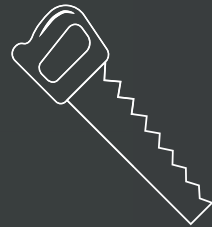

Cloud

Workmate runs seamlessly in the cloud. Run the full version of Workmate in any browser, anywhere.

No software to install, no need to involve I.T. - just login and you're live.

Make your purchase easier with a simple low cost monthly subscription.

Works perfectly with Workmate mobile.

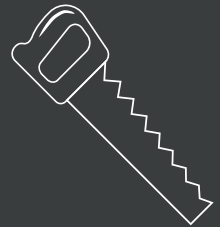

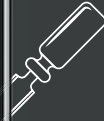

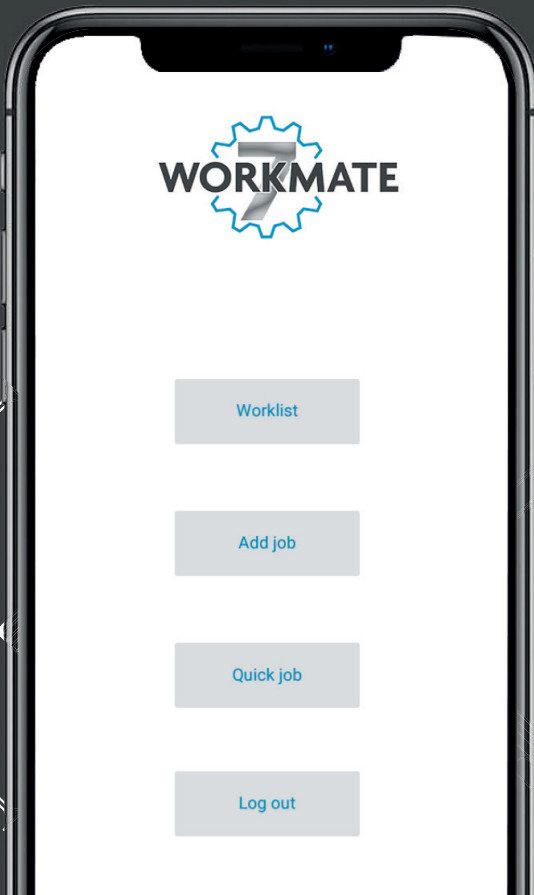

Mobile

Keep track of work, Report faults and complete work from the free to download Workmate Active app on your iOS or Android phone.

Workmate Active works online or offline, so you're still able to add faults or complete jobs even if you have no internet connection.

ABOUT US

Cayman Venture have been supplying Workmate continuously since 1991. Workmate is installed in many industries including food, distribution, manufacturing, automotive, pharmaceutical and facilities.

The company was formed to provide inexpensive maintenance software that is easy to install and, most importantly, easy to use.

We also work closely with our clients so that they are able to realise their objectives and also this also helps the system grow with features that provide real user benefits.

- Workmate has 30 years experience assisting maintenance managers.
- Workmate is easy to use yet has all the functionality of systems many times it's price.
- The Workmate interface can easily be tailored to suit any kind of user.
- We help new customers to set up their Workmate for peak efficiency.
- Workmate is so easy to learn, training requirements are minimal.
- With our fully featured cloud version, I.T. involvement is removed.
- With several ways to buy Workmate, your decision couldn't be easier.

“The original reason we decided to get Workmate was to continue creating a good infrastructure. We decided to use Workmate as I had experience with the software from a previous employer and found it to be a very easy to use, effective system. The training we received was concise and simple.”

Gavin - Wren Kitchens
